

Innocore has taken advantage of the MXM standard and designed the DPX-117 and DPX-C705 mainboards with MXM sockets to meet the demands of current and future gaming needs. MXM modules are based on mobile GPU technology, which enables them to run with minimal power consumption and heat dissipation while providing maximum performance.

WHAT IS MXM?

Mobile PCI Express Module (MXM) is an interconnect standard for GPU's using PCI Express created by Nvidia®. It was originally designed for laptops, the goal being to create an industry standard socket. The standard is now adopted by both Nvidia and ATI for embedded computing, rapidly finding application in a variety of areas including gaming devices.

ADVANTAGES OF MXM

Small Format:

The size of the module is 73mm x 78mm (MXM type II)

Incorporation

The module is installed horizontally on Innocore mainboards for a seamless and robust design.

Speed

Based upon PCI Express x16. Double the bandwidth of AGP 8x.

Memory

Dedicated onboard video memory ranging from 128MB to 256MB.

Efficiency

Based on mobile GPU's for low power consumption and heat dissipation

Simplicity

Offers easy upgrade path as graphical demands increase.

Required Hardware:

- MXM Compatible DPX Mainboard (DPX-117, DPX-C705)
- Backplane
